

Vcarve Makerspace Edition / Version 11.0

Steps for installing the Vectric Vcarve Trial Edition (Makerspace Edition)

- 1) Click the link below to download the execution file provided to install Vcarve from the Vectric website.
 - a. <https://www.vectric.com/free-trial/vcarve-pro>
 - b. Choose: Download Vcarve Pro Trial
 - c. Choose: Download as Guest
 - d. Save to your PC. Then install the software named: VCarveProTrialEdition_Setup.exe
- 2) After Install, an online account window will pop up. Choose "CANCEL"
- 3) Top Left: Choose: Help / About Vcarve Pro Makerspace Client
- 4) Choose: Change Makerspace ID.
- 5) Copy and paste this license number into the text box provided.
 - a. AC180-C2D8A-0CF2F-2EADC-94B16-831F2-64E94

-You now have the Vcarve Makerspace Client Edition installed and can use any of its features except for the final steps in creating G code for your project.

-You must bring your saved .crv file into Makerlab and create the G code on one of our full versions provided on the main PC or a few of the laptops labeled Vcarve Pro.

-**PLEASE NOTE:** You must use a version of Vcarve that is the same as your version or later. Vcarve will not allow you to save back to an older version. We try to keep software up to date, but can miss here and there at times. It is a safe bet that the main computer will always have the latest version available.

-**ALSO:** We were informed by Vectric that we should avoid the 11.5 update at this time because of some bugs that they are dealing with.
